Attn: Mr. David Christa

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

Dear Mr. Christa:

I have completed my review of traffic operations associated with the proposed mixed use development on the west side of southbound Horatio Street between Mulaney Road and Seymour Road in the Town of Deerfield, NY. This letter summarizes the work completed in this review as well as my findings.

Project Understanding

The proposed mixed use development, is located on the west side of southbound Horatio Street, between Mulaney Road and Seymour Road. The property is vacant other than the existing Bank of America facility, which will remain. A conceptual master plan has been attached. Based on the current plan, the following development is anticipated, numbered to match the key on the plan:

1. Affordable Housing – Up to 170 Units
2. Market Rate Apartments – Up to 125 Units
3. Byrne Dairy Convenience Store with Gas – Up to 5,000 SF with 8 Fueling Positions
4. Cracker Barrel Restaurant – Up to 9,000 SF
5. Hotel – Up to 150 Rooms
6. Green Space
7. Stormwater Areas
8. Fast Food Restaurant with Drive Through – Up to 4,500 SF
9. Townhouses / Apartments – Up to 90 Units
10. Garden Apartments – Up to 110 Units
11. Townhouses / Cottages – Up to 135 Units

Access to the development is proposed via the existing Bank of America connection to Mulaney Road to the west of the NYS Route 12 access ramps, three right in/right out only connections to Horatio Street, located 500, 1,230, and 1,780 feet to the south of the Bank of America right in/right out driveway, and a full access connection to the SUNY Polytechnic Institute campus ring road (Technology Drive), opposite Campus Loop Road. The southern right in/right out only driveway will provide access to the fast food restaurant only, while the remaining development will all be interconnected via the other four access driveways.

Mr. Christa

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

Data Collection

Site visits were conducted on Thursday – December 7th, 2023 to collect the following:

- Existing Traffic Volume Counts – Traffic turning movement counts were collected at the following eight intersections during the weekday morning (7-9am) and evening (4-6pm) peak travel periods to ensure that actual peak hours of the adjacent streets were captured.
 - Mulaney Road @ Bank of America access / 12 North Sports Bar access
 - Mulaney Road @ Horatio Street Southbound Onramps
 - Mulaney Road @ Horatio Street Northbound Offramp
 - Mulaney Road @ Trenton Road
 - Horatio Street Southbound @ Bank of America Access
 - Seymour Road @ Woodhaven Road
 - Seymour Road @ Technology Drive
 - Technology Drive @ Campus Loop Road

The traffic counts included passenger cars, separate heavy vehicle counts per direction, and pedestrians. There were minimal pedestrian volumes observed during the traffic count periods. All area schools were in session.

- Mulaney Road and Southbound Horatio Street Gap Data – Gap data was collected to assess the ability for vehicles to turn in and out of the site driveways on both Mulaney Road and Horatio Street. In order for a vehicle to turn right out of the site driveways, or left into the site driveway on Mulaney Road, the vehicle only requires a gap in the eastbound direction on Mulaney Road or the southbound direction on southbound Horatio Street. A vehicle requires a gap in traffic in both directions at the same time to turn left out of the site driveway onto Mulaney Road. These gaps in traffic were observed and timed on both Mulaney Road and southbound Horatio Street passing the site driveway locations during the weekday morning and weekday evening traffic count periods. The gaps were then converted to a number of vehicles that could turn left or right out of the site driveways side roads during each gap and then totaled for the peak hour. For example, one vehicle can turn from the driveway with a 6-9 second gap in traffic, two can turn with a 10-13 second gap, 3 with a 14-17 second gap, 4 with an 18-19 second gap, etc.

Gap data was not collected on Technology Drive as volumes are low and there are minor traffic volumes expected to access the site through the SUNY Polytechnic Institute campus.

- Spot Speed Measurements – Automated Traffic Recorders (tube counters) were placed on Mulaney Road and southbound Horatio Street during the data collection period to obtain existing speed measurements passing the site on both roadways in order to properly identify average and 85th percentile operating speeds in the area.

Mr. Christa
February 1, 2024
Page 3 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

- Sight Distance Measurements – Sight lines looking east/west along Mulaney Road from the site access and north along southbound Horatio Street from the site driveways were collected for comparison to design standards in order to confirm that adequate sight lines are available for safe ingress and egress from the development. There are no concerns with sight lines on Technology Drive given reduced operating speeds on the campus.
- Operational Data – Other data needed to evaluate traffic operations, such as intersection geometry, control, and speeds limits were also collected.

Existing Operations

Southbound Horatio Street is classified as a principal arterial roadway in the area that serves as a frontage road to access businesses along NYS Route 12. Southbound Horatio Street has three lanes southbound between Mulaney Road and the Bank of America access, with two lanes continuing southbound that splits as one lane to Seymour Road and one lane returning to NYS Route 12. There is an additional ramp to NYS Route 12 southbound located approximately 1,230 feet to south of the Bank of America access opposite the proposed location of the middle site access. The posted speed limit on Horatio Street is 55 mph.

Mulaney Road is classified as a major collector roadway and has one through lane in each direction through the study area with a second westbound travel lane between the Horatio Street northbound oframp and the Horatio Street southbound onramp. There are auxiliary east and westbound left turn lanes at the existing Bank of America/proposed site access intersection. Mulaney Road has free flow traffic operations through the study area, with stop sign control at the Trenton Road intersection. The posted speed limit on Mulaney Road is 40 mph.

Trenton Road is classified as a minor arterial roadway connecting Genesee Street to the south to NYS Route 12 to the north. Trenton Road has one lane in each direction passing Mulaney Road with an auxiliary northbound left turn lane and an auxiliary southbound right turn lane at Mulaney Road. The posted speed limit is 55 mph to the north of Mulaney Road and 40 mph to the south of Mulaney Road.

Seymour Road provides a connection between Horatio Street southbound and the SUNY Polytechnic Institute campus, as well as a small neighborhood on Woodhaven Road. Seymour Road has one lane in each directions with no auxiliary lanes at the Woodlawn Road or Technology Drive. The posted speed limit on Seymour Road is 25 mph.

Technology Drive operate as the SUNY Polytechnic Institute campus ring road in the study area and provides connection to the SUNY-Marcy Parkway and River Road to the west. With one travel lane in each direction, Technology Drive is stop sign controlled at Seymour Road and free flow at Campus Loop Road. The posted speed limit on Technology Drive is 25 mph.

Mr. Christa
February 1, 2024
Page 4 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

Based on the traffic counts collected, the peak hours were identified as follows:

Morning Peak Hour – 7:30am to 8:30am
Evening Peak Hour – 4:30pm -5:30pm

The 2023 existing traffic volumes collected in December are shown in the attached Figures 1-2 for the morning and evening peak hours. The traffic count data has been attached.

The existing traffic counts were reviewed and compared to historical traffic volumes on Horatio Street and Trenton Road to identify any necessary seasonal adjustments. Specifically, 2019 AADT counts on the Mulaney Road loop ramp to Horatio Street southbound, the Mulaney Road loop ramp from Horatio Street northbound, and the Trenton Road between Tarlton Drive and NYS Route 12 were taken from the NYSDOT Traffic Data Viewer website. The design hour volumes on these roadway segments were reviewed and compare the evening peak hour volumes collected in December 2023.

Based on the AADT data, the southbound Horatio Street loop ramp has an average daily traffic volume of approximately 2,743 vehicles with a design hour volume of 241 vehicles, which is approximately 36% higher than the evening peak hour traffic count of 231 vehicles. The northbound Horatio Street loop ramp has an average daily traffic volume of approximately 3,262 vehicles with a design hour volume of 296 vehicles, which is approximately 28% higher than the evening peak hour traffic count of 231 vehicles. Trenton Road has an AADT of 5,507 vehicles per day with the design hour volume of 550 vehicles which is 9% higher than the evening peak hour volume of 503 vehicles just south of Mulaney Road. Using the average of these differences, a 25% adjustment factor was selected and applied to the existing December traffic counts to account for seasonal variations in traffic.

The seasonally adjusted 2023 existing traffic volumes are shown in the attached Figures 3-4 for the weekday morning and evening peak hours.

Existing traffic volumes in the area are generally low, leaving reserve roadway capacity to accommodate the proposed development. Mulaney Road generally carries 40-50 vehicles in each direction passing the site access during both peak hours, with volumes in the range of 100-200 vehicles in each direction between the Horatio Street northbound ramp and Trenton Road. Horatio Street southbound carries approximately 500-600 vehicles southbound passing the site during the morning peak hour and 300-400 vehicles passing the site during the evening peak hour. Traffic volumes on Seymour Road and Technology Drive are well below 100 vehicles in each direction during the both peak hours, with the exception of Seymour Road eastbound toward Horatio Street in the evening peak hour, which is approximately 100-200 vehicles.

Based on the gap data collected, there are sufficient gaps in traffic to accommodate over 600 vehicles turning right onto Mulaney Road and over 480 vehicles turning right onto Horatio Street southbound during both peak hours. There were sufficient gaps observed to accommodate over 330 vehicles

Mr. Christa
 February 1, 2024
 Page 5 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
 Horatio Street & Mulaney Road, Town of Deerfield, NY**

turning left out of the site onto Mulaney Road during both peak hours. These gaps in traffic are more than sufficient to accommodate the development even with the 25% seasonal adjustment. There are no concerns with available gaps in traffic to accommodate the development. The gap data is attached.

The posted speed limit passing the site is 40 mph on Mulaney Road and 55 mph on Horatio Street southbound. The speed data collected indicates that the average speeds passing the site on Mulaney Road are 44 mph eastbound and 42 mph westbound, and the average speed passing the site on southbound Horatio Street is 55 mph. The 85th percentile speeds based on the data collected are 50 mph eastbound/49 mph westbound on Mulaney Road and 62 mph on Horatio Street southbound. The speed data has been attached.

The following table provides a summary of the recommended sight distances along Mulaney Road and southbound Horatio Street from the AASHTO A Policy on Design of Highways and Streets as well as the available sight distances based on field measurements. Based on the observed operating speeds, 50 mph was used for the sight review on Mulaney Road and 65mph was used for the site review on Horatio Street southbound. The recommended sight distances for left turn movements onto Mulaney Road have been adjusted to account for the additional lane that must be crossed when exiting the site.

Sight Distance Summary

Location	Operating Speed	Direction	AASHTO Recommended Sight Distance	Available Sight Distance
Site Access @ Mulaney Road Turning Left	50 mph	Looking Left	590 feet	700+ feet
		Looking Right	590 feet	950+ feet
Site Access @ Mulaney Road Turning Right	50 mph	Looking Left	480 feet	700+ feet
North Site Access @ Southbound Horatio Street -Turning Right	65 mph	Looking Left	625 feet	1,000+ feet
Middle Site Access @ Southbound Horatio Street -Turning Right	65 mph	Looking Left	625 feet	900+ feet
South Site Access @ Southbound Horatio Street -Turning Right	65 mph	Looking Left	625 feet	1,000+ feet

There are more than adequate sight distances available along both Mulaney Road and southbound Horatio Street looking from the site access driveways. There are no concerns with sight distances and safety for ingress and egress from either Mulaney Road or southbound Horatio Street.

Capacity analysis of the existing traffic operations was completed using Synchro11, an industry accepted standard for the analysis of both signalized and unsignalized intersections that is based on methodologies developed in the Highway Capacity Manual. Intersection and individual movement

Mr. Christa
February 1, 2024
Page 6 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

operations are graded in terms of Level of Service ranging from A to F, as described in the HCM. For example, an unsignalized intersection movement with an average delay of 5 seconds per vehicle is considered a Level of Service A while an average delay per vehicle of 20 seconds is considered a C. A Level of Service D or better is generally considered acceptable for a signalized intersection while a Level of Service E or better is generally considered acceptable for an unsignalized intersection.

The results of the Synchro capacity analysis indicates that there are no existing operational concerns in the study area. Even with the seasonally adjusted traffic volumes, all traffic movements in the study area are operating at acceptable Levels of Service B or better during both peak hours. The detailed Level of Service summary, queue summary and capacity analysis printouts have been attached.

There are no concerns with existing traffic operations on Mulaney Road or southbound Horatio Street in the vicinity of the project site as there are ample gaps in traffic and clear sight lines in both directions at the proposed access locations. There are acceptable delays at the adjacent intersections with acceptable Level of Service B or better for all traffic movements. These findings are consistent with observations made during the data collection, that there were no significant delays through the area.

Accident Analysis

An accident analysis was completed for the study area using history reports obtained for a three year period from May 2020 through April 2023. Over the three year period, there were 26 total accidents in the study area.

At the study area intersections, there was 1 fixed object accident at the Mulaney Road/southbound Horatio Street onramp, 1 rearend accident at the Mulaney Road/Trenton Road intersection, 1 right turn accident at the southbound Horatio Street/Bank of America access, and 2 accidents (1 right angle and 1 rearend) at the Seymour Road/Technology Drive intersection. Assuming the evening peak hour volumes are 9% of the total daily volumes, the calculated accidents rates for the Mulaney Road/southbound Horatio Street and Seymour Road/Technology Drive intersections are both above the statewide average rates for similar facilities, however, the calculated accident rates are skewed by the low traffic volumes in the area. With only 1-2 accidents in these locations over the past three years, there are no concerns noted. The calculated accident rates at the Mulaney Road/Trenton Road and Horatio Street southbound/Bank of America intersections are both below statewide averages for similar facilities.

There were 3 midblock accident along Mulaney Road including 2 fixed object accidents and 1 animal related accident. Using the AADT of 3,022 vehicles per day, the accident rate is 1.50 accidents per million vehicle miles, which is below the statewide average of 2.32 accidents per million vehicle miles for similar facilities.

Mr. Christa
February 1, 2024
Page 7 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

There was 1 overturned vehicle accident along Seymour Road, 2 animal related accidents along Trenton Road, and 1 animal related accident along Horatio Street southbound included in the data. All link accident rates are below statewide averages for similar facilities.

There were 10 accidents along mainline Route 12 (5 animal, 4 fixed object, 1 sideswipe), 3 accidents along Horatio Street northbound (2 rear end and 1 fixed object), and a parking lot accident included in the data.

Overall, 26 (92%) of the accidents in the study area were property damage only accidents with only 2 injury accidents and no fatalities. 19 of the 26 accidents (73%) were single vehicle accidents and 9 (35%) involved deer. There are no distinct patterns of concern noted. The detailed accident summary and calculations have been attached.

2028 Background Operations

The proposed mixed use development is anticipated to be completed over the next 5 years for analysis purposes, therefore 2028 was used as the design year. In order to fully understand the impacts of the development on the adjacent roadway system, analysis of the operations immediately before the project opening must first be completed. The existing traffic volumes were first adjusted by a growth rate to account for any unknown development that may occur prior to completion of the project.

Historical traffic volumes along Trenton Road between Tarlton Drive and the NYS Route 12 junction, along Mulaney Road between County Route 34 and the Marcy Town Line, and along the northbound Horatio Street offramp to Mulaney Road were taken from the NYSDOT Traffic Data Viewer website and reviewed in order to identify an appropriate background growth rate. Long term growth rates in the area have been positive on Trenton Road around +0.2% per year between 2010 and 2019, negative on Mulaney Road around -4.2% per year between 2008 and 2019, and positive on the Horatio Street northbound offramp around +3.1% per year between 2010 and 2019. In order to maintain a conservative analysis, a positive 2.0% per year growth was chosen and used to grow the 2023 existing traffic volumes to the 2028 background condition.

In addition to unknown growth that may occur in the area, specific site generated trips associated with known or approved development must also be incorporated into the growth projections. The Town of Deerfield Planning Department indicated that there were no specific approved developments in the area that needed to be included.

The 2028 background morning and evening peak hour volumes for the study area with 2% growth per year (10% total) are shown in Figures 5-6.

The Synchro capacity analysis of the 2028 background condition shows minimal increases in delay at the study area intersections during the peak hours. There are no changes in Level of Service noted.

Mr. Christa
February 1, 2024
Page 8 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

The detailed Level of Service summary, queue summary and capacity analysis printouts have been attached.

Trip Generation Estimate and Distribution

The proposed mixed use development is anticipated to include the following uses as full build out:

1. Affordable Housing – Up to 170 Units
2. Market Rate Apartments – Up to 125 Units
3. Byrne Dairy Convenience Store with Gas – Up to 5,000 SF with 8 Fueling Positions
4. Cracker Barrel Restaurant – Up to 9,000 SF
5. Hotel – Up to 150 Rooms
6. Green Space
7. Stormwater Areas
8. Fast Food Restaurant with Drive Through – Up to 4,500 SF
9. Townhouses / Apartments – Up to 90 Units
10. Garden Apartments – Up to 110 Units
11. Townhouses / Cottages – Up to 135 Units

The green space and stormwater areas will not generate any traffic. Trips generated by the remaining uses were estimated using the ITE Trip Generation, 11th Edition, which is the industry accepted standard for estimating traffic generated by new developments. Land Use 220 – Multifamily Housing (Low Rise) was used for all of the residential uses as it is the most conservative multifamily land use. Land Use 945 – Convenience Store/Gas Station – GFA (4/5.5K), Land Use 932 – High-Turnover (Sit-Down) Restaurant, Land Use 310 – Hotel, and Lane Use 934 – Fast Food Restaurant with Drive Through Window were used for the commercial portions of the development.

A 10% internal trip capture credit was applied to the overall estimate to account for residents/hotel visitors using the commercial amenities without generating outside vehicular trips, such as dining at the restaurants or stopping to get gas on their way in or out of the site.

A significant portion of the traffic generated by the commercial portions of development will be drawn from traffic already passing the site, and is referred to as pass-by trips. Pass-by trips are vehicles that are already traveling through the study area but will now stop at the development on their way to another destination, such as stopping on their way to or from work or school. Based on data from the ITE Trip Generation, the average pass-by trip percentage for a convenience store/gas station is 60% during the morning peak hour and 56% during the evening peak hour. The average pass-by trip percentage for a high turn-over restaurant is 43% during the evening peak, 25% was assumed for the morning peak hour. The pass-by trip percentage for a fast food restaurant is 50% during the morning peak hour and 55% during the evening peak hour. The pass-by trip percentages were applied after the internal capture credits to avoid compounding credits.

Mr. Christa
February 1, 2024
Page 9 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

The following table summarizes the trip generation estimate for the proposed mixed use development on Mulaney Road and southbound Horatio Street in the Town of Deerfield.

Trip Generation Summary

	Morning Peak Hour		Evening Peak Hour	
	Entering	Exiting	Entering	Exiting
Lot 1 – Apartments – 170 Units	16	52	55	32
Lot 2 – Apartments – 125 Units	12	38	40	24
Lot 3 – Byrne Dairy – 5,000SF/8 Fuel Pos.	108	108	91	91
Lot 4 – Cracker Barrel – 9,000 SF	47	39	49	32
Lot 5 – Hotel – 150 Rooms	39	30	46	43
Lot 8 – Fast Food w/ Drive Thru – 4,500 SF	103	98	78	71
Lot 9 – Townhouses/Apartments – 90 Units	9	27	29	17
Lot 10 – Apartments – 110 Units	11	33	35	21
Lot 11 – Townhouses/Cottages – 135 Units	<u>13</u>	<u>41</u>	<u>44</u>	<u>25</u>
Total Individual Trips Generated	358	466	467	356
<i>Internal Capture Credit – 10%</i>	<u>-36</u>	<u>-46</u>	<u>-47</u>	<u>-35</u>
Total Trips Vehicular Generated	322	420	420	321
<i>Pass-by Trips – Byrne Dairy – AM 60%, PM 56%</i>	-58	-58	-46	-46
<i>Pass-by Trips – Cracker Barrel – AM 25%, PM 43%</i>	-9	-9	-16	-16
<i>Pass-by Trips Fast Food – AM 50%, PM 55%</i>	<u>-45</u>	<u>-45</u>	<u>-37</u>	<u>-37</u>
Total Pass-by Trips Generated	<u>-112</u>	<u>-112</u>	<u>-99</u>	<u>-99</u>
Total New Trips Generated	210	308	321	222

The detailed trip generation calculations have been attached.

Many people expect that residential land uses will generate an average of 2 trips per unit during peak hours. The trip generation rates for residential land uses are generally less than 1 trip per unit for a number of reasons. The primary reason is that people work different times, some may leave for work at 6:30 in the morning while others may leave at 7:30 or 8:30. Subsequently, the arrival patterns home in the evening will also be staggered over multiple hours. Some people work evenings while others may stay at home or work from home. The rates contained in the ITE Trip Generation have been verified and provide an accurate representation of what may be expected for this development during the peak hours of the adjacent streets.

Mr. Christa
February 1, 2024
Page 10 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

Using existing traffic patterns and population centers in the area, 55% of the new trips generated are expected to travel to/from the south on NYS Route 12 or Trenton Road, 25% will travel to from the north on NYS Route 12 and Trenton Road, 10% will travel to/from the southwest on Technology Drive, 5% will travel to/from the northwest on Technology Drive, and 5% will travel to/from the west on Mulaney Road. Separate pass-by trip distributions were developed for each peak hour based on the specific traffic patterns during each peak hour. The anticipated arrival/departure distribution for the morning and evening peak hours are shown in Figures 7-8. The trips generated during each peak hour are shown in Figures 9-10, and the resultant full build traffic volumes expected when the development is complete are shown in Figures 11-12.

Build Operations

Based on the projected turning movements on Mulaney Road and southbound Horatio Street, there are more than sufficient gaps available to accommodate the build traffic volumes projected with the proposed development.

Capacity analysis of the build condition with the proposed mixed use development indicates that the development will generally have only minor impacts on traffic operations in the area. The following minor drops in Level of Service are noted:

Mulaney Road @ Bank of America/Site Access

- NB Left/Through/Right – LOS A to B (+1-2 seconds) – Morning & Evening Peak Hour
- SB Left/Through/Right – LOS A to C (+6 seconds) – Morning Peak Hour
- SB Left/Through/Right – LOS A to B (+5 seconds) – Evening Peak Hour

Mulaney Road @ Horatio Street Northbound Offramp

- SB Left/Right – LOS B to C (+4 seconds) – Evening Peak Hour

Mulaney Road @ Trenton Road

- EB Left/Right – LOS B to C (+12 seconds) – Morning Peak Hour

Technology Drive @ Campus Loop Road

- EB Left/Through/Right – LOS A to B (+2 seconds) – Evening Peak Hour

There is one notable drop in Level of Service on the eastbound Mulaney Road approach to Trenton Road during the evening peak hour, which drops from LOS B to E with an increase in average delay of +23 seconds per vehicle. This movement is projected to operate just at the threshold between a LOS D and LOS E. The projected full build traffic volumes would not warrant for a traffic signal at this location and the anticipated queues on the eastbound approach is only 6 cars during the evening peak hour. This intersection should be monitored as the development is completed to determine if any mitigation is necessary at this location.

Mr. Christa
February 1, 2024
Page 11 of 12

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

All three driveways along southbound Horatio Street and the driveway at Technology Drive are projected to operate at Level of Service B or better during both peak hours.

The detailed Level of Service, Queue summary and capacity analysis printouts have been attached.

There are no mitigation measures recommended.

Build Operations without SUNY Polytechnic Institute Access

A supplemental analysis was completed to determine if there are any additional impacts associated with the project in the event that the proposed connection to the SUNY Polytechnic Institute (Technology Drive) is not constructed.

The 2028 build traffic volumes were redistributed assuming the trips to/from the southwest on Technology Drive will now use Horatio Street northbound/southbound to access the site, and the trips trips to/from the northwest on Technology Drive will now use Mulaney Road to access the site. The redistributed 2028 build traffic volumes without access to Technology Drive are shown in Figures 13-14.

Capacity analysis of the build condition without access to Technology Drive shows no notable changes from the build conditions analysis with access to Technology Drive. The detailed Level of Service, Queue summary and capacity analysis printouts have been attached.

Although not necessary from a strict capacity standpoint, the connection is recommended to provide cross access in the area and to distribute traffic.

Conclusions

The additional traffic generated by the proposed mixed use development will have no notable or significant impact on traffic operations along Mulaney Road or southbound Horatio Street. Traffic volumes are generally low in the area which provide ample capacity to accommodate the additional traffic generated by the proposed development. There are ample gaps in traffic to accommodate turning movements into and out of the development, good sight lines in each direction, no significant capacity concerns, and no significant accident history in the area.

There is potential for increased delays turning off Mulaney Road on to Trenton Road during the evening peak hour. Operations should be monitored as the development is completed to determine if any mitigation is necessary at this intersection.

Mr. Christa
February 1, 2024
Page 12 of 12

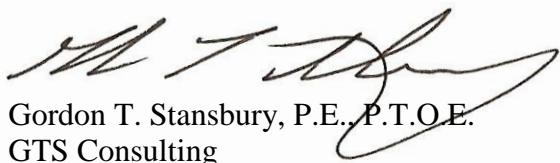

**Re: Traffic Impact Assessment – Proposed Mixed Use Development
Horatio Street & Mulaney Road, Town of Deerfield, NY**

Cross access is recommended to Technology Driveway, although there are no additional capacity concerns if the connection is not constructed.

There are no mitigation measures recommended.

If you have any questions or need additional information, please call.

Sincerely,

Gordon T. Stansbury, P.E., P.T.O.E.
